The MAX() Function

The MAX() function returns the largest value of the selected column.

SQL MAX() Syntax

```
SELECT MAX(column_name) FROM table_name
```

SQL MAX() Example

We have the following “Orders” table:

O_Id	OrderDate	OrderPrice	Customer
1	2008/11/12	1000	Hansen
2	2008/10/23	1600	Nilsen
3	2008/09/02	700	Hansen
4	2008/09/03	300	Hansen
5	2008/08/30	2000	Jensen
6	2008/10/04	100	Nilsen

Now we want to find the largest value of the “OrderPrice” column.

We use the following SQL statement:

```
SELECT MAX(OrderPrice) AS LargestOrderPrice FROM Orders
```

The result-set will look like this:

LargestOrderPrice
2000
