[Blog post](#)

Crystal Reports: for advanced, pixel-perfect static reporting, provides a wide variety of scheduling and delivery options and integrates easily with .NET and Java applications.

Desktop Intelligence: A client-server architecture Reporting and Analysis tool which enables offline reporting. In newer versions you may not find DeskI as this will be replaced with WebI Rich Client.

[Web Intelligence](#): Powerful analysis tool which offers interactive reporting and analysis for information consumers. With Web Intelligence users can query the organization's databases using everyday business vocabulary without having to understand the technical way the information is stored. WebI is accessed through the BusinessObjects portal InfoView via an internet browser which allows users to share documents with other users
