Hi Folks, here is the another piece of information that I would like to share with you all...

Hi Sudheer,

As the velocity of business increases, business users expect to be able to interact with information and create their own views of data. At the same time, BI teams would like to offload report and analytics creation duties to users and focus on more value-added activities. Fortunately, there is a new crop of self-service BI tools that promises to empower users while liberating the BI team from ad hoc reporting tasks.

On July 12, join Claudia Imhoff and Colin White for a Webinar that will cover the results of the recently published TDWI research report they authored on self-service BI. This report covers the tools, techniques, and technologies that leading-edge BI teams are deploying to users to improve their ability to create ad hoc reports and analytics and service their own information needs.

Live Webinar: Self-Service BI: Empowering Users to Generate Insights

When: July 12, 2011, 9:00 a.m. PT

Register now or save time and register for multiple Webinars.

You will learn:

What self-service BI really means

What technologies support the empowerment of your business users

How to deploy these technologies in a sustainable fashion

The best practices and practical tips to ensure success

The results of an extensive survey of TDWI members related to this important research

This Webinar has limited capacity and will fill up quickly, so register early to ensure your spot.

Self-Service BI: Empowering Users to Generate Insights

To your success,

TDWI
