[Awesome \(2\)](#) [Interesting \(0\)](#) [Useful \(1\)](#)

### Open the Server Manager

*Start*→ *Programs*→ *BusinessObjects DataIntegrator*→ *Server Manager*

1. Server Manager window will be opened, now click on *Edit Job Server Config*
2. Click on *Add* button
3. Job Server Properties window will be opened
4. Enter the unique *Job server name, port*
5. Now click on *Add* button in the *Associated repositories* section
6. Now, you have to specify your repository details in the *Repository information* section such as *Database type, Connection name, User name* and *Password*. Click on *Apply* button
7. Click on *OK* button. You will bounce back to Job Server Configuration Editor window with a new Job Server entry
8. Click on *OK* button.
9. Finally click on *Restart* button.
10. DI services will be restart.

**Job Server Properties**

Job Server name: JS3

Job Server port: 3502

Support adapter and SNMP communication:  Enable SNMP:

Communication port:

---

**Associated Repositories**

ORADB11\_BODI\_REPO

Add Edit Delete Resync

**Repository Information**

Database type: Oracle

Database connection name: ORADB11

User name: BODI\_REPO

Password: \*\*\*\*\*

Default repository:

Apply Revert

---

OK Cancel
