1. To create a DI Oracle local repository, first of all we need to log logon to oracle sys account

Connect SYS/SYS AS SYSDBA

2. Now we have to create a user

CREATE USER BODI_REPO IDENTIFIED BY BODI_REPO

DEFAULT TABLESPACE USERS

QUOTA UNLIMITED ON USERS;

3. Now we have to provide some privileges to that user

GRANT CONNECT, RESOURCE TO BODI_REPO;

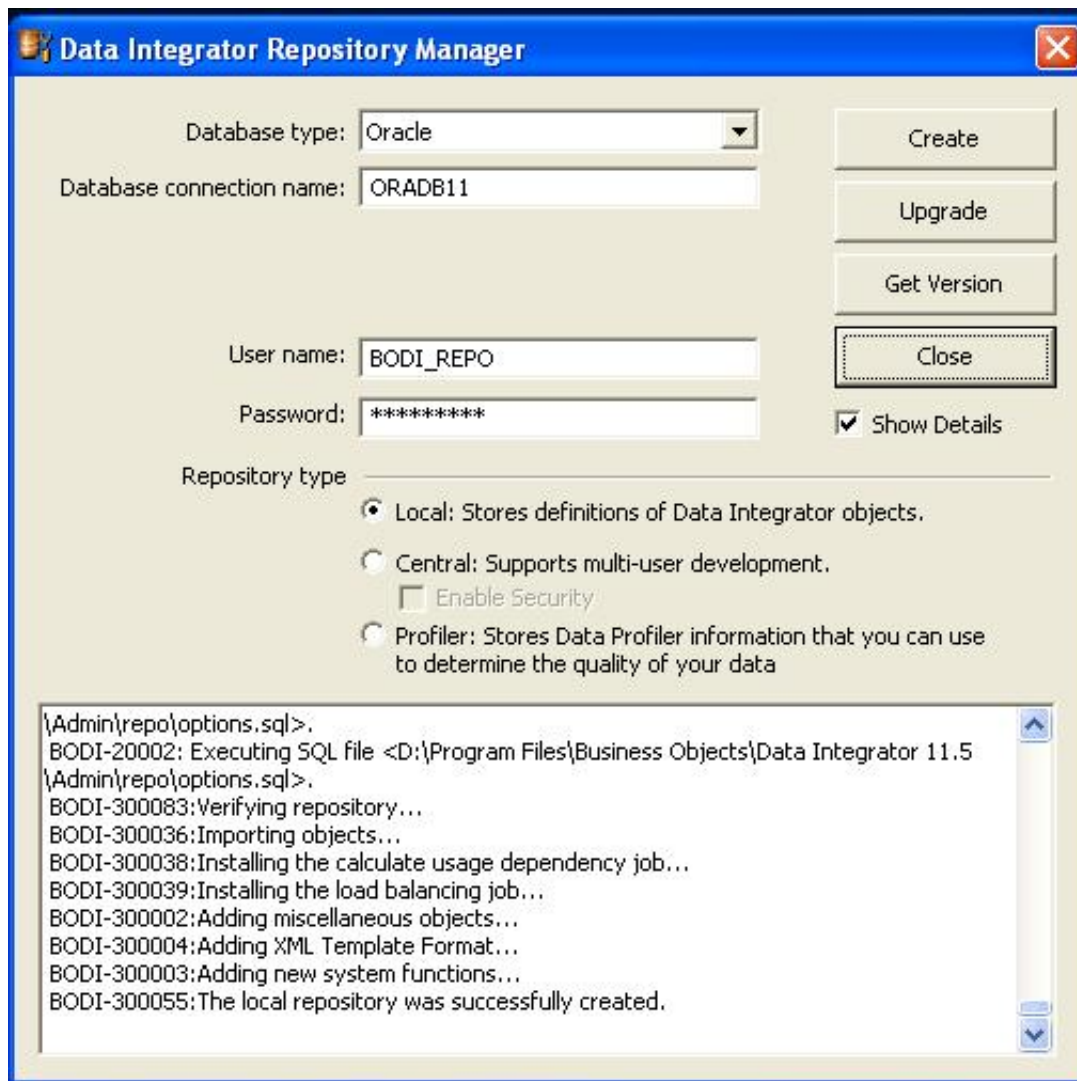

4. Now create a repository using repository manager

Start-> Programs-> BusinessObjects DataIntegrator-> Repository Manager

5. Specify the Database connection name

6. Give username and password as **BODI_REPO** and click on **Local**

7. Select the option **Show Details** and click on **Create** button

8. Creation of Local repository has been completed successfully
